

Electronic Recycling

TelcoScrap will arrange for pick up of your electronic waste for transportation to our state of the art facility in New Jersey, or any of our regional collection points.

Our state-of-the-art recycling equipment shreds and separates electronics into their original material of plastics, steel, various metals, alloys, and glass. An advanced filtering system insures that it does so without any harmful air emissions.

TelcoScrap is leading the industry in developing and utilizing new applications for these commodities and preventing any electronic waste from entering landfills. This gives us the capacity to handle the deluge of telecom equipment, power and other electronic scrap that are quickly made obsolete by the introduction of **CDMA**, **3G**, and **4G**, and numerous rapid advances in technology.

Preventing the disposal of electronic equipment through responsible recycling is our number one goal, and this guarantees you that you are not only complying with laws but also doing the right thing for the earth.

Rest assured that your telecom equipment, including computers, cell site equipment, batteries, phone systems and cell phones will be managed responsibly. Our secure environmentally sound methods eliminate any worry about retiring your unwanted equipment. Our certificates of recycling provide you with proof your organization's progress is not coming at the cost of our land, air and water.

We **protect you** from the potential dangers of electronic waste disposal because we recycle electronic equipment in accordance with all laws and regulations and lead the industry in innovative methods of electronic equipment recycling.
